**COURSE DESCRIPTION**

Our society faces increasing challenges in sustainably managing environmental and natural resources. Policy making at various levels has become more contentious when it comes to dealing with the environment. Economics offers diverse insights in efficiently managing scarce resources. This course is designed to familiarize students with economics tools and techniques that are used in managing environmental and natural resources. The class will help you to understand the economic and social justifications for various environmental policy approaches made at different levels.

**COURSE OBJECTIVES**

Students will be able to:

- Identify the applications of economic principles in managing natural resources and the environment;
- Analyze and assess specify the competing demands for our limited natural resources and trace the need for best management practices for allocating, managing, and protecting the environment;
- Critically evaluate diverse policy measures influencing environmental and natural resource management.

**COURSE PREREQUISITES**

You need to have an introductory microeconomics course (ECO 3021: Economics and Society-Micro, or ECO 2021: Micro Principles, or an equivalent course) as a prerequisite in order to take this class.
